Flexible carapace: Pélagie's exoskeleton reduces bludgeoning damage by 2d6.

Water sense: Level 3

Cold resistance: Level 3

Enhanced memory: Level 2

Pélagie's Story

Pélagie arrived on Earth in 2070 as a member of Nova's crew on an observation mission. Like Nova and the Coordinator, she was quickly captured by the SU, before she could grasp the extent of its corruption. During her early captivity, the SU kept her alive through a series of vivisections.

Her attempted escape changed everything. The SU sharply escalated its experimental protocols, making Pélagie a priority subject: isolated, altered, remade. The brutal, irreversible transformation distorted her body and fractured her mind, leaving her unstable and violent. Officially classified as a deformed, dangerous test subject, she is held in strict confinement at the Omega-7 laboratory.

Fragments of her former self remain, visible to anyone who takes the time to look. A photograph of her original form and artifacts she hid before her breakdown suggest she may not be entirely lost.

She attacks the group if attacked, believing she is in danger.
