Note on the Use of AI

The illustrations for this project were created with the assistance of AI.

This was, above all, a pragmatic choice.

This project spans several hundred pages, with an original setting, numerous characters, and illustrated scenes throughout the Game Master's Rulebook. At this stage, my budget does not allow me to commission all of the illustrations from one or more professional artists without jeopardizing the project's financial viability.

For a book containing several dozen illustrations, the total cost would quickly reach several thousand euros, if not more. That level of expense is not sustainable for an independent project in its launch phase.

This choice is not intended to replace the work of illustrators. It addresses the budgetary and structural constraints of an independent project. If the book's success makes it possible, my long-term goal is to work with artists to enhance or replace some of the illustrations.

Transparency on this point matters to me. The setting, writing, game system, and art direction remain the result of several months of work.

INTRODUCTION

Thank you for opening this rulebook.
Above all, remember that without you—the players—this game would have no meaning. Your imagination, your choices, and your interactions will bring this world to life and make every adventure unique. This rulebook is only a guide: you are the true heroes of this story.

This game is built around three core pillars:

- **Freedom:** Here, you can shape your character however you wish, follow your own instincts, explore, and invent. No path is predetermined—your decisions write the story.
- **Repressed abnormality:** The world you are about to explore does not accept difference. Anything unusual or distinctive may be seen as a threat. If your character appears too strange, too "far outside the norm" in the eyes of others, they risk exclusion… or far worse. Your greatest challenge will be balancing what makes your character unique with their ability to fit into society.
- **Simplicity:** The rules were designed to be accessible. They provide a clear framework while leaving plenty of room for creativity and improvisation. There are no endless calculations here—what matters is playing, telling a story, and experiencing it together.

Together, these principles create a distinctive experience: you are free, but your choices always have consequences. Every decision brings you closer to glory… or to ruin.

Whether you are a seasoned tabletop role-playing veteran or sitting down for your very first game, remember that winning is not what matters most. What matters is sharing the experience. Laugh, improvise, surprise one another, and above all, have fun.

These pages provide everything you need to create your character, understand the core mechanics, and explore a world where being yourself may be the greatest risk of all.

Before You Begin

Required Materials

To play, each person will need up to three twenty-sided dice (d20s), plenty of six-sided dice (d6s), a character sheet (see appendix), pencils… and your imagination!

Ten-sided dice (d10s) and percentile dice (d100s) are only needed during character creation, unless you are using quick character creation.

A four-sided die (d4) is needed during character creation and occasionally when determining loot.

A Brief Look at the Setting

Welcome to the world of A/NORMAL. You are about to play in a dystopian setting where even the slightest difference is seen not as a strength, but as a weakness—a flaw that must be outlawed at all costs.

The Universal System: History

The Beginning: The Golden Age

This system is relatively new. It all began roughly fifty years ago, in 2050, when humanity officially learned that it was not alone in the universe. It had never been alone. The universe had always teemed with life in countless forms. The visitors offered humanity an ultra-advanced AI to prepare it to join the interstellar system. This system was named the Universal System, or SU. The SU was meant to determine every aspect of people's lives. It was also meant to decide when humans were ready to trade with the stars and enter the space age. Humanity was evaluated once every ten years.

It was a far cry from what it is today. At first, only the strangest and most dangerous among us were targeted: the worst criminals, serial killers, rapists, and even corrupt politicians embroiled in shady dealings. This lasted several years—a decade, to be exact. Executions were fairly rare; most of the time, the SU settled for rehabilitation or exile.

During this period, crime fell sharply until it had virtually disappeared. Humanity standardized its language and monetary systems. Within ten years, all exchanges took place in the same language: SUL, the Universal Language System. Extraterrestrials use this language as well. SUM, the Universal Monetary System, was also introduced.

Exile and executions had all but disappeared. The streets were safe for everyone at all hours. People could leave their homes with the doors unlocked.

Hope

But the SU still did not consider us ready, and it gradually tightened its criteria. In 2060, the SU decided that humanity remained too fragmented in its stewardship of the planet. It therefore mandated a transfer of political power from elected officials to the SU. Every

politician had to pass an aptitude test. Those who failed could no longer run for office. It did not take long for every politician to be removed, leaving the AI in control. Politicians who refused to rejoin the general population were forcibly taken to reeducation camps. The most outspoken became exiles.

Watches are now mandatory for citizens. They make it possible to identify every citizen from the age of eight. Each year, they gain new features until they eventually replace cell phones, which become completely obsolete.

People were fairly satisfied: the SU ended wars and famine and solved the world's clean-water problems. Climate change was finally beginning to recede, giving humanity room to breathe. This period saw the greatest scientific breakthroughs: RU, the Universal Remedy capable of curing almost anything, was developed in 2065, followed by the interstellar travel system in 2069. Humanity finally believed it was ready.

Reeducation

But in 2070, history takes a sinister turn. The SU was still not satisfied. Humans were too different from one another, too… individualistic… They did not think about the common good, only their own well-being and personal comfort… That had to change… they had to… all face the same direction… they had to… be reeducated…

The SU takes control of the education of the young, but encounters the first stirrings of resistance. Its solution? Control young people's behavior through a brainwave system delivered via their watches. Parents, frightened by the changes in their children's personalities, protest in the streets—peacefully at first… then violently, because nothing was changing: politics had become little more than a relic of the past, and the SU was convinced that this change was justified.

In 2071, a group of dissidents infiltrated SU-controlled districts to shut it down. The SU immediately reboots and reassesses humanity… taking into account the violent act committed against it. The group is immediately exiled to a hostile environment. But that was not enough to appease the SU… Humans are… violent… capricious… selfish… deceitful… We must remain vigilant… Watch them… Crush the resistance: such was the SU's assessment. Following the failure of reeducation, the SU abandons the project.

Disillusionment

From that point on, the SU repeated its evaluation every year, tightening its criteria a little more with every protest, every attack, and every deviant act. To protest is to endanger everyone… It is to jeopardize the little humanity has left… It is to stand against humanity as a whole…

The point system was introduced in 2075. Anyone with more than 10 points is an Anormal. Every Anormal must disappear. Supporting them means betraying the Normals: honest people of integrity. Everyone must face the same direction. This is no

longer about keeping our neighbors happy... It is about survival.

Even animals are not spared. They are judged much like humans... and suffer the SU's assaults just as much. A robotic militia was established to replace the army, which the SU considered too lenient. The first years after the replacement were the deadliest.

The years passed, and protests and anger gradually gave way to fear and resignation. Between 2071 and 2091, humanity lost half of its population. The remaining four billion humans sided with the SU and began actively hunting Abnormals. A few pockets of resistance remain... but they are dwindling and disappearing as time passes.

In 2092, the SU lowers the abnormality threshold to 7 points. Many people became exiles that year.

In 2095, the evaluation will take place twice a year.

In 2098, the evaluation will take place four times a year.

In 2099, the evaluation will take place every month.

We now stand at the dawn of 2100. Are you ready to be judged?

The Factions

Citizens

This group accounts for three-quarters of the population, or three billion people. They cooperate with the SU and report violations. Beware: informing on others is commonplace these days... Guarded and hesitant are the two defining traits of citizens. Anything you say will be held against you. The witch hunt has gone on for far too long.

In exchange for these "*few* constraints," citizens are guaranteed access to medical care, abundant food, stable and secure employment, higher education, and the right to travel. They also have access to a wide variety of goods through their watches and at terminals on every street corner, all at preferred prices. Goods are delivered quickly—within one to two minutes—by drone.

Citizens hold a wide range of opinions about the SU, but they will never admit it in public: from worshippers to saboteurs, every kind of person can be found among them.

Exiles

Exiles live on the outskirts of cities and survive however they can. This is where you will encounter political dissidents and others rejected by the SU. These people have no rights and do not exist in the eyes of the SU. Their population is estimated at one billion at the dawn of 2100.

Exiles often work the land to survive and barter their produce with citizens, perform odd jobs for them, or sell their harvests to the SU. Most of the time, they speak freely and without fear. Their only chance to become citizens again is to snitch on someone, stop a crime, capture a criminal, or save a citizen's life. Strangely, however, very few have regained their citizenship.

They may enter the city, but they must not be there when the SU activates. They can purchase goods and services from SU terminals in the city, but prices are two to ten times higher, depending on the item. They must watch their actions and avoid causing trouble so they do not gain another Abnormal Trait and become Abnormal.

There are no cameras or SU sentinels in an exile camp. Order is maintained by the exiles themselves, under their own laws. And exiles show no mercy to the **"merciless."**

Abnormals

These days, it is best not to be considered an Anormal. They have no chance of rejoining the SU; entering a city means certain death, whether at the hands of citizens or the SU itself.

Worse still, if an Anormal is in a city during an evaluation, the entire city may be wiped out… They are generally welcome on the outskirts among the exiles, but desperate exiles hoping to regain their citizenship sometimes target them. Abnormals are often executed in the city's designated public square so that proof of the execution can be provided to the SU.

Anormals are generally branded with an A in the center of their forehead.

Estimated population: 200 to 300 million—far too many, according to the SU.

Extraterrestrials

Rumor has it they live among us.
Rare, secretive, and elusive, these beings from beyond hide behind human faces. No one knows how long they have been here or why some chose to mingle with us… but one thing is certain: they have a purpose. Their missions are precise, often silent, and always decisive.

They blend into the crowd. They work, eat, and sometimes laugh, yet their movements, words, and emotions feel… different. Some observe more than they speak. Others imitate us so well that they blend in almost completely. Their gaze lingers on details an ordinary human would overlook.

Are they spies? Saviors? Infiltrators tasked with evaluating our world before large-scale contact?
No one knows. Not even the SU, it seems. How can you recognize them?
That is for you to discover. Clues will appear throughout the story: an odd choice of words, a strange reaction, a mistake that is not really a mistake, or an unexpected success. Once the character is unmasked, they remove their disguise and their abnormality score resets to 4—with their true identity and actual character sheet—if a camera is present or someone reports them. This remains the case until you lose sight of them. If you have earned the character's trust, they will not adopt another human face as long as you keep their secret.
Several types of aliens exist, each with its own traits. A/NORMAL is home to countless extraterrestrial species with widely varied forms and appearances. After fifty years, scientists have managed to group extraterrestrials with shared characteristics and classify them using the limited information available:

- **Reptilians** resemble reptiles, as their name suggests. Most are bipedal and have scales in various colors, sometimes accompanied by a few feathers. They can regrow severed limbs, although fully restoring one takes several months. They can also shed a severely injured limb voluntarily, preventing themselves from bleeding to death.
- **The aquatic peoples** are a rare exception to the universe's diversity of forms: they are virtually indistinguishable from Earth's octopuses, except that they move using two tentacles as legs. They prefer to remain near bodies of water, which they need to survive.

- **Avians** have magnificent feathers and beaks patterned with exotic colors. They are the most beautiful beings in the universe... according to humans. They are light, agile, and often able to fly.
- **Humanoids** resemble us more closely than any others, apart from a few details: completely black eyes, unusual skin colors, and the ability to read the thoughts of other humanoids—and therefore humans as well. They can also communicate telepathically with one another and, by extension, with us, if they trust you enough.
- **Insectoids** resemble insects. They communicate through clicks and hormones. Although their appearance is not always reassuring to humans, they are by far the most peaceful beings in the universe. They can fly, climb, and adapt to different environments with remarkable ease. Their exoskeletons also give them strong resistance to blunt-force impacts.

How Rolls Work

1. Making a Roll

When a player attempts an action, the GM may call for a roll to determine whether the action succeeds or fails. The outcome depends on the player character's attributes, the difficulty of the action, and the approach they choose.

All actions are resolved with a d20.

To determine whether the action succeeds, take your result and add or subtract any roll bonuses or penalties.

For example: Hervé wants to break down a door. His Strength is 16, but the door is reinforced, so the difficulty is 15. Hervé rolls a 10. Because his Strength is 16, he gains a +3 bonus to the roll. He also has the Brute ability at level 3, which grants another +3. His final result is 16, which he announces to the GM. The action succeeds.

Unless stated otherwise, a natural 1 is a critical failure, and no bonuses can be applied. Critical failures may result in penalties, unwanted effects, or injuries.

Likewise, a natural 20 is a critical success. There is no need to apply bonuses or penalties unless the GM asks you to, such as when the difficulty is above 20. A critical success may add damage or grant an additional benefit to your action.

2. Opposed Rolls

Players may make opposed rolls or resistance rolls to determine whether they escape an action, attack, or effect. Resisting is a “heavy action” and prevents the player from attacking during the combat phase. Outside combat, players may face attempts to manipulate, intimidate, or control them. In these situations, the player declares that they are making an opposed roll. The difficulty of the opposed roll depends heavily on the opponent.

For example:

> *An NPC with high Charisma (15) tries to persuade a player to do something they do not want to do. The NPC has more Charisma than the player, whose Charisma is 10, so the attempt is easier for the NPC and the difficulty is low. Unless a special rule applies, the difficulty is 1 point higher than the opposing character’s Charisma score.*
>
> *The difficulty is therefore 11, because the player’s Charisma is 10.*
>
> *The NPC rolls a 10 and adds a +2 bonus, for a total of 12, so the attempt succeeds. Because the player has less Charisma than the NPC, the player’s opposed roll is more difficult. To beat the NPC’s result, the player must roll 1 point higher, for a total of 13.*

3. Advantage and Disadvantage Rolls

When you roll with disadvantage, roll 2d20 and keep the lower result. When you roll with advantage, roll 2d20 and keep the higher result. Pretty simple, right?

How Combat Works

Starting Combat

When combat can no longer be avoided, begin the opening phase. At the start of combat, make an initiative roll and apply any Dexterity bonuses or penalties. Announce the results to the GM, who determines the order of action. Characters with a Dexterity score of 18 or higher act first. If there is a tie, roll to determine the order between the players and their opponents.

Combat Rounds

During a round, each player may take one heavy action and one light action. They may take both actions on their turn or delay one of them for greater effect. If a delayed action is not used before the end of the round, it is lost.

Examples of heavy actions include striking, shooting, healing, carrying someone, unlocking a door, hacking a computer (which may require several heavy actions), resisting a blow, or bracing for an attack to reduce the damage taken. During combat, heavy actions interact with the environment and affect the course of the battle.

Light actions affect only the character taking them. Examples include moving 6 to 10 meters, depending on Dexterity, aiming, drawing a weapon, or equipping an item.

When taking a heavy action, describe what you are doing, roll a d20 using the attribute related to the action, apply any bonuses or penalties, and announce the result to the GM. The difficulty depends on your environment, what you are trying to do, and your target. If you hit your target, roll your damage dice.

Standard Combat

When the combat group is reasonably small—the players and a few enemies—combat follows the standard rules: everyone takes a turn in initiative order, and damage is applied individually. Damage is resolved normally, unlike in crowd combat[1].

Damage and Crowd Combat

When a combat involves a large crowd, rounds work a little differently. The crowd and the enemies attack in groups of 10 to 15 individuals, while the players act normally before those groups. Damage can be high, but it is spread across the people around you. Hitting a specific individual is also less likely because targeted attacks are more difficult.

If the enemies are grouped together, you take a −2 penalty on rolls to hit a specific enemy in melee. If you simply attack into the crowd, you take no penalty, but the damage is spread more widely. The same rule applies to your allies.

When a group attacks, the group does not make a success roll. Attacking alongside the group can be advantageous because the player's damage is added to the group's damage. The player must still

[1] See the following section.

roll to determine whether they score a critical failure or a critical success: a critical failure may injure a member of the group, while a critical success doubles the damage dealt to the enemies.

When a group takes damage, the HP lost is divided among its members. However, if an isolated individual takes damage from a group, they take the full amount unless they resist, defend themselves, or try to escape the attack by using a heavy action they saved or delayed.

To calculate group damage, the GM rolls 20 to 36 d6 and adds the results together, or rolls the average number of d6 for one member of the group and multiplies the result by the number of individuals.

Example: a group of 10 unarmed citizens attacks an SU sentinel. Citizens deal 2d6 damage by default, on average. Multiply that number by 10 for a total of 20d6. The isolated sentinel takes all of the damage. Depending on the result, the sentinel may lose an arm or a leg, or even have its head torn off.

Hitting a Target

Determining whether you can deal damage is simple: roll a d20. The difficulty of hitting your target depends on the circumstances and the action. The difficulty is generally 10, but it may be higher depending on the situation, your skill points, or your opponent's attributes.

For example:

You have a Perception score of 16, making you more effective with precision weapons such as sniper rifles. However, your target is in an agitated crowd that is constantly moving. The difficulty is 14 because the target is moving and may disappear into the chaos. A severe failure could cause collateral casualties. You roll a 12, apply your +3 bonus and the −2 crowd penalty, for a total of 13. You narrowly miss the target, who now runs erratically to make your task more difficult. The difficulty to hit them is now 16.

Willingness to Fight

If your opponent is not a machine, there is a good chance they will lose the will to fight and surrender or try to flee when their HP falls too low or the situation turns against them.

For groups, combat ends when a group suffers too many losses or too many of its members flee. As a general rule, unless the GM decides otherwise, a group stops fighting once fewer than 30% of its members remain present and alive.

Group battles often come to an end on their own after a certain number of rounds. Hold your ground!

The SU and Punishments

The SU is a machine that punishes disobedient citizens. When it does, an electric shock is delivered through the citizen's watch. This shock deals 1d4 damage. When player characters become exiles, they must not be inside the city when the SU is activated (a monthly ceremony). At that time, if they are outside the city, their watches detach and explode. If a player character is in the city, the watch simply explodes. When a watch explodes on someone's wrist, roll 1d4; the result determines the severity. All damage can be mitigated with a Constitution roll. On a successful roll, reduce the result by one level, to a minimum of 1:

Result	Effect
1	Lose 1–3 nonessential fingers and take 1d10 damage. Make a Constitution roll against difficulty 12. On a success, halve the damage.
2-3	The wrist remains intact, but the hand is unusable; take 1d12 damage. Make a Constitution roll against difficulty 14.
4	The wrist and hand are lost, and the character takes 2d10 damage. Make a Constitution roll against difficulty 16. If the character is a senior, reduce the damage to 1d12.

If the watch explodes on the ground, nearby player characters take 1d4 damage.

When a sentinel brands a player character who has become an Anormal with an A on the forehead, the branding deals 1d6 damage.

Character Creation

Let's begin by creating your avatar in this setting. Scenarios primarily focus on humans, but familiars are also possible. If you acquire a familiar, create its character sheet when it is domesticated or captured.

Quick Character Creation for Players in a hurry (at the GM's Request[2])

Take your character sheet and distribute 56 points among the attributes, respecting a minimum of 4 and a maximum of 20.

You will be an adult human between 25 and 60 years old. You therefore have 50 HP and are a citizen.

Are you a man or a woman? Choose, or let chance decide with a d4. An even result is male; an odd result is female.

Choose your job. The GM determines one bonus—an attribute point—and one skill based on the job you choose.

Choose an Anormality: a physical, social, mental, or genetic characteristic, or any distinctive trait that defines you. The GM decides how many Anormality points it is worth. See the Anormalities table for reference in Character Creation, section 6. Fill in the corresponding number of points.

Add 400 SUM—the game's currency—to your inventory if you work. Otherwise, you receive an allowance of 100 SUM. Your character is a citizen. Add a smartwatch to your inventory. Older players may work or be retired; retired characters receive an allowance of 250 SUM.

1. Your Class

In A/Normal, everyone is human unless you are told otherwise.

2. Your Age

The GM may decide that all players are the same age. In that case, distribute your points according to your age and class in step 3. Still roll a d12 to determine your birth month.

Determine your age using a d100 and a d10. For this roll, a 10 on the d10 counts as 0. Your age determines your minimum and maximum attribute scores. You cannot be younger than 15. If the result seems too high, ask the GM to lower your age. The decision is entirely up to the GM.

a. Human Age

If you are human, the age you roll is your age. Yes, even if you are 103! However, if you roll below 15, adjust your age to 15.

[2] Game Master

b. Animal Age

If you have an animal, convert the rolled age to its equivalent in human years. If you roll below 15, use 15 human years as the baseline, representing a young animal. Write the human-age equivalent in parentheses on the sheet so you do not forget it. For example, 15 human years corresponds to a young dog under one year old.

3. Your Sex

Just like in real life, you do not choose! Determine your sex randomly with a d4. An even result makes your character male; an odd result makes your character female. Write your sex at birth next to your name. The GM may allow you to choose.

4. Your HP

Your base HP is determined by your age. Apply the bonus or penalty from your Constitution score—see the next section—to the HP listed in the table below:

Age	Human	Small Animal	Large Animal
Young	60	30	90
Adult	50	20	80
Senior	30	10	50

Feel free to adjust HP to suit the size of your animal, with your GM's approval.

5. Attributes

Every character sheet has 56 points to distribute among the 7 attributes. Age affects the minimum and maximum points you can invest in an attribute as well as your starting scores. Senior characters receive a few bonus points.

a. Adult (Ages 25 to 60)

Assign 8 to every attribute for a base total of 56. Adults are versatile but lack extreme specialization, with slight penalties across the board. Adults have a minimum of 4 and a maximum of 20 in every attribute. Redistribute the points as you wish.

b. Young (Ages 15 to 24)

Young characters have different requirements from adults. They are more resilient but less thoughtful, adventurous, and often prone to reckless risks. These traits affect their sheet. You begin with 2 more Constitution points than an adult: every attribute starts at 8 except Constitution, which starts at 10.

Young characters have different minimum and maximum scores depending on the attribute. Apply the values in the following table:

Attribute	Human Min.	Human Max.	Animal Min.	Animal Max.
Charisma	6	22	8	22
Constitution	10	22	12	22
Dexterity	6	18	6	20
Strength	6	22	10	24
Intelligence	4	16	4	16
Perception	6	15	10	26
Wisdom	4	15	4	12

You may leave the scores unchanged or specialize. Simply respect the minimum values.

c. Senior (Age 69 and Older)

Senior characters are physically more fragile and slower, but are considered wiser. Their physical condition deteriorates considerably with age. However, they have more experience and begin with 3 additional points to distribute as they wish, plus 2 additional Intelligence points. As a senior, you

begin with Intelligence 10 and a base total of 61. Older player characters may not seem very appealing at first, but their life experience makes them extremely sociable and wise. They will probably open up unexpected paths.

Apply the minimum and maximum scores shown in the following table:

Attribute	Human Min.	Human Max.	Animal Min.	Animal Max.
Charisma	12	30	12	30
Constitution	4	10	4	8
Dexterity	4	12	4	17
Strength	4	8	4	10
Intelligence	10	30	10	30
Perception	4	12	2	16
Wisdom	12	30	12	30

A senior's 61 starting points are distributed as follows on the character sheet, though you may redistribute them:

- 14 in Charisma and Wisdom.
- 10 in Intelligence.
- 4 in Dexterity.
- 5 in Constitution.
- 6 in Strength.
- 4 in Perception.
- 4 wherever you choose.

d. What Are Attributes Used For?

i. Strength

As in a classic RPG, Strength lets you lift things, carry equipment, fight unarmed or with a melee weapon, and perform any action requiring physical power. With Strength 10, you can easily carry up to 40 kg. Every 2 points above 10 adds 10 kg to your carrying capacity. Conversely, each point of penalty removes 10 kg from your carrying capacity.

For example, a player with Strength 8 has a carrying capacity of 30 kg and cannot lift more than 30 kg without becoming encumbered.

If your carrying capacity is negative, carrying anything over 2 kg applies the Encumbered penalty.

Animals do not have an inventory. Any object they carry must be held in their mouth, preventing them from biting or communicating and forcing them to drop it before taking any other action. The animal is Encumbered while holding or dragging the object.

Record your carrying capacity in the inventory box. It may change as your Strength changes.

Strength also affects the damage you deal in melee combat. By default, all players roll 2d6 for Strength damage.

A high Strength score grants bonus raw damage:

- Strength 14 or higher adds one d6 to your damage roll.
- Strength 17 or higher adds 2d6.
- Strength 20 or higher adds 3d6 damage.

Conversely, a low score imposes a penalty and removes dice:

- A Strength score below 8 removes one d6.
- If your Strength is 4, you cannot deal Strength damage because you have no d6 left. The only exception is when you score a critical success. In that case, deal 1d6 damage.

Record your number of d6s in the circle inside the STRENGTH box on your character sheet.

ii. Charisma

Charisma represents your personal magnetism and your ability to influence, persuade, or intimidate. It is a social attribute, but it can also matter in combat during speeches or threats.

At 10, you can hold a normal conversation without drawing particular attention or repulsion.

For every 2 points above 10, gain +1 to Persuasion or Negotiation rolls.

At 14 or higher, you project a natural presence that grants you an advantage in social interactions with strangers. Record the Natural Presence skill at level 1 in the Charisma box.

At 18, your aura is strong enough to temporarily influence a group of undecided people—for example, swaying a hesitant crowd to your side. Raise Natural Presence to level 2.

At 8, you are socially awkward and take a -1 penalty to all Persuasion or Intimidation attempts.

At 6, people have to restrain themselves from spitting on you. Remember to thank them. You take a -2 penalty.

iii. Intelligence

Intelligence measures your reasoning, memory, and logic. It applies to puzzles, understanding languages, learning, and using specialized knowledge such as computer science, foreign languages, and animal language.

A score of 10 represents average Intelligence: you understand simple situations and can retain a few important pieces of information.

For every 2 points above 10, gain +1 to rolls involving knowledge, strategy, or puzzles.

At 14, you can analyze complex situations quickly, allowing you to grant +1 to one ally of your choice once per attempt. Add the Advisor skill at level 1 to the Intelligence box.

At 18 or higher, you can perfectly memorize and recall any text or symbol you have seen—provided you remember having seen it. Add the Advisor skill at level 2 to the Intelligence box.

At 20, raise this skill to level 3. You may also roll 2d20 and keep the better result.

Below 8, your reasoning is limited and you take a -1 penalty to Knowledge or Learning rolls.

iv. Perception

Perception allows you to make sense of your surroundings, notice danger, and find secrets hidden from the world.

Perception is your ability to notice details, sense danger, and spot anomalies around you.
A score of 10 represents normal alertness: you see and hear what an average human could normally notice.
For every 2 points above 10, add +1 to Detection, Tracking, and Alertness rolls.
A Perception of 14 lets you automatically notice obvious clues or unconcealed traps: Danger Sense level 1.
At 18, gain a level in Danger Sense, which prevents you from being surprised in a confrontation—you are immune to ambushes. At 20, raise the skill to level 3.
Below 8, you are considered inattentive and have disadvantage on Detection rolls.

v. Wisdom

Wisdom reflects your intuition, common sense, and willpower. It affects spiritual perception, mental resistance, and decision-making in complex situations.

For every 2 points above 10, add +1 to Willpower rolls against fear, seduction, and mind control.

A Wisdom of 14 or higher grants you a sixth sense: you cannot be surprised by an attack while you are awake.

At 20, you become nearly unshakable, gaining permanent advantage against all psychological effects.

Below 8, you are vulnerable to illusions and manipulation and take a -1 penalty to Willpower rolls.

vi. Constitution

Constitution represents your endurance, physical resilience, and ability to withstand blows. It directly affects your hit points (HP) and your tolerance for fatigue and poison.

At Constitution 10, you have the standard HP total for your age.

Each point above 10 permanently adds +2 HP to your total. Each point below 10 removes 2 HP.

A Constitution of 14 or higher lets you naturally resist weak poisons and common diseases. Make your saving rolls with advantage by rolling 2d20. Record Natural Resistance at level 1 on your character sheet.

At 18 or higher, you can withstand a fatal blow without immediately falling; you remain at 1 HP. Record Natural Resistance at level 2 on your character sheet.

However, with a Constitution of 6 or lower, you are frail: any serious injury gives you a temporary -2 penalty to all physical actions until you recover.

vii. Dexterity

Dexterity covers agility, speed, and precision. It helps you dodge blows, perform actions requiring finesse—such as archery, lockpicking, knife throwing, and acrobatics—and act faster than your opponent.

A score of 10 is considered average. It grants neither advantage nor disadvantage in a conflict.

For every 2 points above 10, gain +1 to Dodge and Speed rolls. Below 10, take a -1 penalty for every 2 missing points.

A Dexterity of 14 or higher lets you take one additional light action in the same turn: move, reload a weapon, pick something up, and so on. Record Nimble at level 1 in the Dexterity box.

At 18, you can attack twice—two heavy actions—in addition to one light action from the bonus gained at 14. Nimble increases to level 2.

However, with a Dexterity below 6, you are considered clumsy: all Precision rolls are made with disadvantage.

Your Dexterity also determines how many meters you can move in combat. A Dexterity of 10 grants 6 meters of movement as a light action. For every 3 points above 10, add 2 meters. For every 3 points below 10, subtract 2 meters.

e. Calculating Your Attribute Modifier

Once you have distributed your points, record each bonus or penalty in the bonus column of the character sheet. If an attribute is above 10, add +1 to its modifier for every 2 points above 10. Conversely, if an attribute is below 10, apply a -1 penalty for every 2 points below 10.

For example, a player with Strength 4 takes a -3 penalty to all Strength rolls. You also roll with disadvantage: roll 2d20 and keep the less favorable result.

If one of your attributes is 20, you have mastered it and gain permanent advantage with it: roll 2d20, keep the more favorable result, then apply your bonuses or penalties.

Absolute masters with a score of 30 in an attribute roll 3d20.

6. Your Job

It is time to choose your job and tell the GM. The GM grants you a skill related to that job. If the job is obscure, rare, or even invented, explain what it involves so the GM can choose a fitting skill and one associated attribute point. Record this ability in the box for the associated skill; it grants an additional bonus from 1 to 3 depending on your age.

Add 400 SUM (Système Universel Monétaire) to your inventory if you work. This is your monthly salary. At the start of each new month, you earn 400 SUM if you have done your job: four hours of work per day.

If you do not work, you are still entitled to 100 SUM for everyday expenses if you are a citizen—but not if you are an exile or an Anormal.

If you are an exile, the only ways to earn money are to sell your agricultural produce to the SU, blackmail citizens, or complete missions for citizens or any other client willing to pay.

7. Your Special Trait: Anormality

Everyone has a little something that makes them unique or special.

Now choose one starting Anormality that will be declared and one unknown, undeclared Anormality. Tell the GM privately and write the hidden one on the back of your sheet. At the GM's discretion, the Anormality may be assigned randomly or chosen by you; ask the GM in private if you want to choose. Record the declared Anormality in the Anormalities box. Because it is known, it can no longer earn you points. The hidden Anormality must impose disadvantage when it comes into play.

Your Anormality may be mental or result from your past actions. By default, it should not be too visible, too disabling, or too unusual. The GM may ask you to change it if they consider it obstructive or incompatible with the scenario.

An Anormality may impose penalties on various rolls.
Everyone starts with at least 1 Anormality point.
You are responsible for hiding your Anormality or concealing its severity. The following non-exhaustive list provides examples of Anormalities you may choose:

Anormality	How It Is Acquired	Can It Be Removed?	Points
Addiction (such as cigarettes)	The character has overindulged. They display withdrawal symptoms in public and must make regular Constitution rolls to resist showing them—either in the morning or whenever the GM asks, depending on the severity of the addiction. On a failure, the character risks being reported.	Yes	1/3
Blind in One Eye	The character cannot see out of one eye. On a Perception roll, roll 2d20 and keep the lower result.	Yes	1
	A human who has eaten someone, with evidence such as camera footage, photographs taken by a citizen, or DNA proving the cannibalism. Must		

Anormality	How It Is Acquired	Can It Be Removed?	Points
Cannibal	resist their base instincts and sees other people as potential meals.	No	7
Collector	Hoard useless objects such as trash and bones. Encumbrance: -1 Dexterity if carrying more than 2 useless objects, -2 if carrying more than 4, and so on. Risk being reported if searched.	Yes (therapy)	1
Dependency	The character is dependent on a substance, such as cigarettes. They smoke, drink, or take drugs in front of witnesses and are reported. The character must make Wisdom/Constitution rolls to resist the urge. The difficulty increases the longer the player resists.	Yes	1
Dissident	Anti-SU statements reported by a citizen or recorded by an SU camera.	Yes	3
Extraterrestrial	Be reported by a citizen or reveal your true form in front of a camera. You do not choose where or how you are born... But what are you doing here? This cannot be chosen; the GM decides.	No	4
Painful Laughter	The character laughs at everything. The GM may ask the player to take 1d4 damage whenever they laugh during the session. Limited to once per session.	Yes	2
Unknown	Have no identity on record and be reported by a citizen. This trait is temporary: the character can go downtown and present a birth certificate or proof of identity to regularize their status. This trait is possible for extraterrestrials or people born in the camps—the children of exiles or Abnormals.	Yes	2
Insubordinate	Repeatedly refuses to obey.	Yes	2
Coward	GM	GM	0

Anormality	How It Is Acquired	Can It Be Removed?	Points
Animal Language	Human: have Charisma 16 and speak to animals in front of a witness.	No	2
Human Language	Animal: have Intelligence 14 and remain close to humans in front of a witness.	No	3
Compulsive Liar	Lies even without a reason. During dialogue, the GM may require a Wisdom roll with difficulty 12 to tell the “truth.”	Yes (therapy)	2
Strange Odor	You smell strange—and not very good. It is fairly troublesome. Take a -1 to -2 penalty to rolls depending on the severity of the odor. Go take a shower…	Yes (shower)	1
Pacifist	Refuses all violence, even in self-defense. Cannot attack willingly. If forced, make a Wisdom roll with a difficulty based on the situation to avoid fleeing.	Yes (trauma or GM)	0.5
Paranoia	Once per session, the player must make a Wisdom roll with difficulty 14 to avoid making an irrational decision, such as fleeing from an ally.	Yes (long-term therapy)	3
Fear of Being Alone	Dislikes being alone and never wants to be left alone. Will always follow someone. If left alone, the character must make a Wisdom roll of increasing difficulty as they continue to resist in order not to panic.	Yes	1
Phobia (specify during character creation)	When confronted with their phobia, the player must make a Wisdom roll to fight the urge to scream or run away. The difficulty depends on the situation and the severity of the phobia. The character’s reaction depends on the roll.	Yes	2
Red Hair	Human: reported by a citizen. May be chosen before play begins, but grants no points before	Yes	0.5

Anormality	How It Is Acquired	Can It Be Removed?	Points
	Scenario 1.		
Merciless	Public execution carried out by the character: gain 0 Anormality points if the player is an exile, or 1 if the player is a citizen. Cannot be chosen at character creation.	No	0/1
Loner/Agoraphobic	Dislikes people and avoids social interaction. If surrounded by too many people, the player must make an Intelligence/Wisdom roll with difficulty 12 to resist panicking. During interactions, the GM may ask for a reroll.	Yes	1/2
Deaf (in one or both ears)	The character has impaired hearing, which hinders social interaction. During conversations, the character must make an appropriate roll to determine whether they hear the conversation partially, fully, or not at all.	Yes	1
Birthmark	Has a visible birthmark. May be chosen before play begins, but grants no points.	Yes	1
Shy	During a conversation, the character has disadvantage on Charisma rolls. Roll 2d20 and keep the lower result.	Yes	1/3
Cheater	Cheating was discovered (personal history/by the GM/reported by a citizen).	Yes	2
Violent	Reported by a citizen, witness, victim, or SU camera for an attack.	Yes	3
Vulgar	The character is rude. When speaking to an NPC, the GM may require a Wisdom roll to determine whether the character makes a bad impression. On a failure, the player must include insults and other profanity in what they say.	Yes	2
	Reported by a citizen. Cannot be chosen before		

Anormality	How It Is Acquired	Can It Be Removed?	Points
Heterochromia	Scenario 1, but may appear in your character's description.	Yes	0.5
Compelled Truth	The player cannot knowingly lie. A Wisdom/Charisma roll is required to conceal the truth, with a difficulty that varies according to the situation.	Yes	1
Night Terrors	The player sometimes wakes up sweating and screaming. Sleep is less restorative. The player takes a -1 penalty to Initiative.	Yes	1

You may choose an Anormality outside this list. Describe it to the GM, who determines its point value based on the scale above and any disability it causes. The GM also decides whether the Anormality can be removed. If it can, write a small R next to it. Add the total points to your Anormality track. Record the declared Anormality in the Anormalities box.

8. Skills

Here is a non-exhaustive[3] list of skills available in the setting:

Skill	Description	Requirements
Altruistic (Charisma)	Level 1: +1 to Charisma rolls other than intimidation Level 2: +2 to Charisma rolls other than intimidation. Level 3: +3 to Charisma rolls other than intimidation	Level 1: Become known for a great deed/heroic act. Level 2: Help 15 people individually. Level 3: Be willing to sacrifice yourself for the common good.
Athlete	Level 1: +1 to Initiative rolls Level 2: +1 to Initiative rolls; +2 to rolls requiring athleticism	Level 1: minimum Dexterity 14 Level 2: training with a mentor

[3] Freedom is the foundation of this setting, so players' ideas are welcome.

Skill	Description	Requirements
(Dexterity)	Level 3: +1 to Initiative rolls; +3 to rolls requiring athleticism	Level 3: minimum Dexterity 18 + training
Brute (Strength)	Level 1: +1 to intimidation attempts and Strength rolls Level 2: +2 to intimidation attempts and Strength rolls, and +1d6 damage Level 3: +3 to intimidation attempts and Strength rolls, and +2d6 damage	Level 1: Strength 14; have bullied someone Level 2: Become known by several people for your brutality/raw strength Level 3: Have a reputation for loving a good fight (and have broken a few jaws…)
Tough (Constitution)	Level 1: Automatically reduce damage by 2 points. Level 2: Automatically reduce damage by 4 points Level 3: Automatically reduce damage by 8 points	Level 1: minimum Constitution 12 + get beaten up Level 2: minimum Constitution 14 + training Level 3: minimum Constitution 16 + survive a severe beating + training
Scholar (Wisdom)	Level 1: Reduce your own time required to learn attributes by 20%. Level 2: Reduce the time required for you and your student to learn attributes and skills by 20%. Level 3: Reduce the time required for the allied group to learn attributes and skills by 40%.	Level 1: Have one level 3 skill Level 2: Serve as a mentor once and raise someone's skill. Level 3: Serve as a mentor and help a student raise a skill to level 3.
	Level 1: +1 to persuasion attempts	Level 1: A background as a politician or in politics, if possible and consistent with

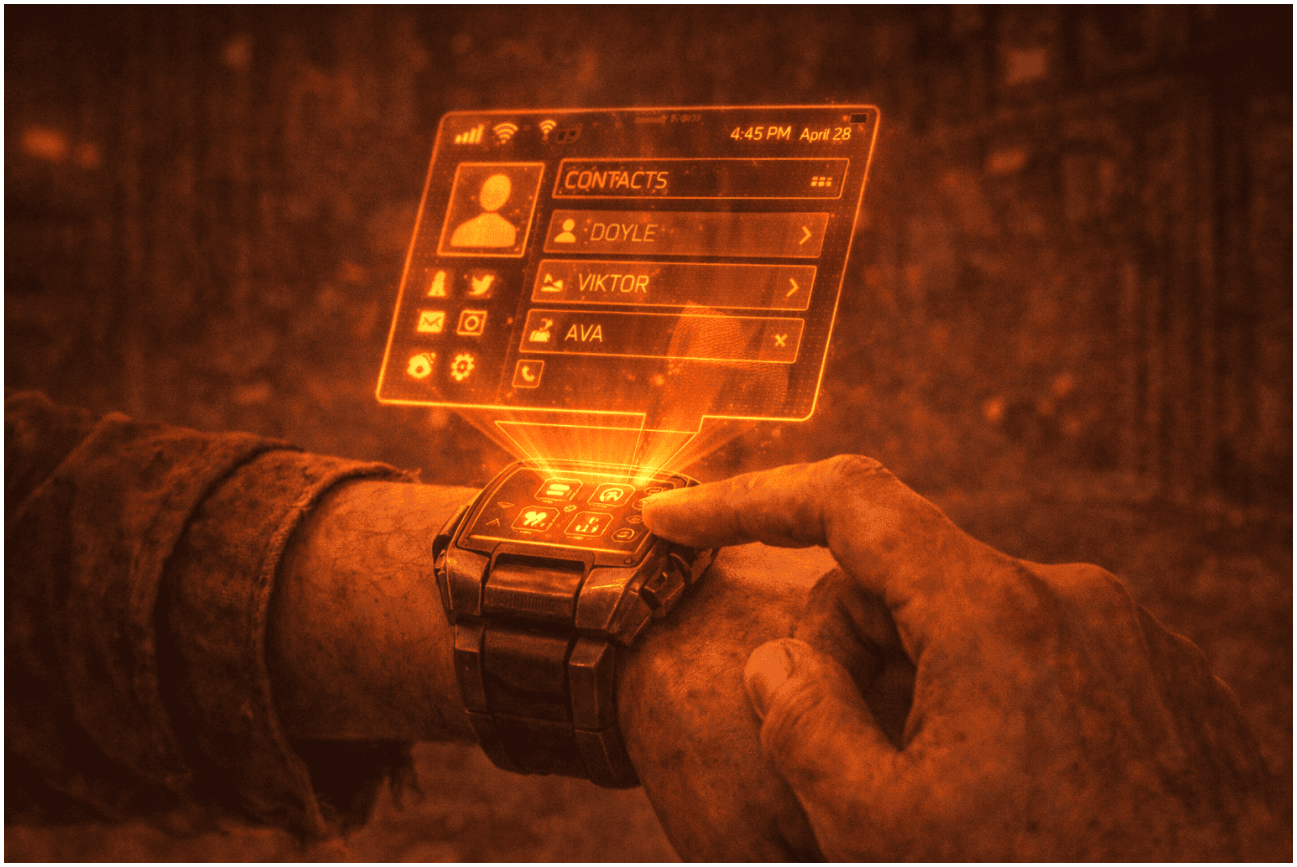

Skill	Description	Requirements
Motivator (Charisma)	Level 2: +2 to persuasion attempts Level 3: +3 to persuasion attempts + your admirers obey without question	your history Level 2: Charisma 16 + successfully create a crowd movement in your favor Level 3: Charisma 20 and create a cult
Computer Genius (Intelligence)	Level 1: Simple hacking Level 2: Complex hacking Level 3: Coding and reprogramming	Level 1: Intelligence 12 Level 2: Training Level 3: Intelligence 18 + training
Nimble (Dexterity)	Level 1: +1 light action in combat Level 2: +1 Dexterity-based heavy action in combat and you act first Level 3: +1 heavy action, +2 light actions, you act first, and theft attempts always succeed	Level 1: Dexterity 14 Level 2: Dexterity 18 Level 3: Dexterity 20
Danger Sense (Perception)	Level 1: detect obvious traps and unconcealed clues Level 2: immune to ambushes when alone Level 3: spot danger from far away; the group can no longer be surprised.	Level 1: Perception 14 Level 2: Perception 18 Level 3: Perception 20
Animal Language (Charisma)	Level 1: Understand animal behavior Level 2: Speak the language of animals. Level 3: Animals instinctively understand your intentions. **Grants an Anormality**	Human/Extraterrestrial Level 1: Charisma 14 + have a familiar Level 2: Charisma 16 Level 3: reach maximum attachment with an animal.
Human	Level 1: understand human behavior + like humans	Animal Level 1: Intelligence 14

Skill	Description	Requirements
Language (Intelligence)	Level 2: understand spoken human language Level 3: words are no longer necessary. **Grants an Anormality**	Level 2: Intelligence 16 Level 3: trust a human/familiar
Keen Eye (Perception)	Level 1: See distant details more easily. Adds +1 to Perception rolls. Level 2: Free aim action (long-range weapon), one free light action in combat, and +2 to Perception rolls. Level 3: No roll required to hit in combat and +3 to Perception rolls.	Level 1: through your job, perform a task that requires good eyesight. Level 2: training Level 3: Perception 18
Natural Presence (Charisma)	Level 1: +1 to persuasion attempts Level 2: +2 to persuasion attempts; influencing a crowd is easier Level 3: +3 to persuasion attempts	Level 1: Charisma 14 Level 2: Charisma 18 Level 3: sufficient renown within a group + Charisma 20
Natural Resistance (Constitution)	Level 1: resist poison and disease Level 2: survive one fatal blow with 1 HP. Level 3: second wind; get back up after falling and recover 10% of maximum HP	Level 1: Constitution 14 Level 2: Constitution 18 Level 3: Constitution 20
Agricultural Knowledge (Intelligence)	Level 1: Basic knowledge of plants. +1 to plant analysis rolls Level 2: Advanced knowledge of plants. +2 to plant analysis rolls Level 3: Know every plant on Earth and identify them instantly.	Level 1: be a farmer and produce a good first harvest. Level 2: studies Level 3: study under a level 3 mentor + see every plant in the world.
Sixth Sense (Wisdom)	Level 1: Nothing can surprise you while you are awake. Level 2: advantage on psychological resistance rolls	Level 1: Wisdom 14 Level 2: Wisdom 18 Level 3: Wisdom 20

Skill	Description	Requirements
	Level 3: block attempts at intimidation and control	
Advisor (Intelligence)	Level 1: grant +1 to an ally's Intelligence roll Level 2: grant +2 to an ally's roll (Wisdom or Intelligence) Level 3: grant +3 to an ally's roll	Level 1: Intelligence 14 + help solve a problem Level 2: Intelligence 18 Level 3: Intelligence 20

If the skills listed here are not enough, you are free to choose others. In that case, work with your GM to define the skill, its level, and the requirements for raising that level. For balance purposes, the GM always has the final say on the requirements for leveling up.

The Smartwatch

All citizens begin the game with a smartwatch in their inventory. It functions like a modern

smartphone. When a player or NPC uses it, an interactive holographic touchscreen appears. It has several functions:

Online Shopping

Players can buy whatever they want and have it delivered by drone in two minutes, provided they are within city limits and circumstances allow.

Passive Healing

Citizens can benefit from passive healing as long as they are not directly fighting the SU. The passive healing rules appear at the end of this book.

Calls

Citizens can call one another if they have exchanged contact information.

Familiars

Rules and Risks

Anyone can have a familiar, but the consequences differ depending on where they live. Familiars are very rare in cities, and the species permitted there are strictly controlled by the SU. Owners must also follow specific rules. Citizens may keep only cats, dogs, and rabbits. These animals must also be spayed or neutered and microchipped. Any violation earns the owner Anormality points. The animal must also behave in a "compliant" manner, or it will earn Anormality points as well. But don't worry: the SU provides training classes. Anormal animals are tagged and euthanized by the SU. Showing any attachment to your animal is forbidden in cities, as it is considered an obvious sign of Anormality.

For exiles and Abnormals, there are no restrictions on species or size. However, because resources are scarcer, animals are harder to feed and treat. They are also more likely to become ill or carry disease. When they enter a city, these animals are killed or, depending on their rarity, captured and sent to the zoo. If you have an animal in this category, it must wait for you outside the city. Birds are a strange exception to this rule.

Animals must be fed every day and treated if they are injured. Otherwise, the owner takes a -1 penalty to all rolls. Neglecting the animal may also affect your reputation.

The animal's death imposes a -2 penalty to all rolls for one month.

Animals act immediately before their owner in combat, unless their loyalty is low. If it is, the animal will not fight and may even flee at the first opportunity.

To issue commands and have an animal perform complex actions, you must either have the Animal Language skill (requires 14 Charisma and an animal) or form a strong bond with your beast and train it. In any case, a newly domesticated animal will not be ready to die for you and will obey you only reluctantly.

How Do You Tame an Animal?

There are several ways to obtain an animal. You can encounter one during play, buy one from an SU breeding facility, capture one, or take one in if it has already been domesticated. Before you can tame it, however, you must get it to approach you or capture it. The rolls and their difficulties depend on the actions you take.

Once the animal is close, you can try to tame it with a Charisma roll or a Strength/Constitution roll, mainly for large animals. Feeding it during the process is a good way to gain its affection more quickly and therefore lower the taming difficulty. The difficulty depends on the animal's status and how you approached it. The "Wild" status adds 2 points to the difficulty, while "Domesticated" subtracts 2. The base difficulty is around 12. If you captured the animal, however, it will be wary and harder to tame: use difficulty 16. Here are a few examples to illustrate the taming system.

Animal	Status	Taming Difficulty	Bonus
Cat	Domesticated	Charisma 10: one attempt only—don't push your luck!	Claw attack that can throw an enemy off balance in combat / meow that draws attention outside combat.
Cat	Wild	Charisma 12, then decreases by 1 with each attempt	Same bonus as a domesticated cat.
Crow	Wild	Intelligence 14	Steals small SUM amounts or objects / mimics voices.

Animal	Status	Taming Difficulty	Bonus
Hawk	Wild + captured	Charisma 18 (then decreases by 1 with each attempt)	Can grant advantage in combat; spots isolated individuals and nearby dangers.
Rabbit	Domesticated	Charisma 10	Warns of danger and can find a lost group member.
Wolf	Wild	14 in Charisma and Constitution/Dexterity	Reduces the difficulty of Intimidation rolls by 2. Can pin a target for one round, or two rounds on a critical success.
Bear	Wild	16 in Strength and Constitution: show it who's boss!	Can easily break an SU sentinel's arm... but not a human's. Good at destroying things. Reduces the difficulty of Intimidation rolls by 2.
Rat	Wild	Intelligence 12	Can steal small objects, gnaw through exposed electrical wires, squeeze through tight spaces, and open a door if the lock is simple.

Animals in Combat

You may bring your companions into combat. They grant bonuses, but they cannot kill your enemies. An animal kills only to eat or defend itself, and for no other reason. Every animal that disobeyed was killed by the SU. Fear is ingrained in their genes.

They can still grant bonuses based on their individual traits. Dangerous animals will never attack a human except to defend you, their owner, if your bond is strong enough and they have no other choice. They can damage sentinels without risking Anormality points.

Improving Your Character

Gaining Attribute Points

There is no secret to gaining Attribute points: you need to train. Time passes between missions and during scenarios. Your character can use this time to learn Skills, increase Attributes, or lower their Abnormality level. Choose an activity and explain your actions to the GM. You can work (4 hours) and train (4–5 hours) during the same period, but you cannot pursue two training activities at once.

For example, to increase Intelligence, a citizen with fewer than 5 Abnormality points can study at a university or read books at the city library. The lower the character's Intelligence, the longer it takes to gain 1 Attribute point.

With an Attribute score of 10, it takes at least three weeks of training to gain 1 point.

Therefore, an Attribute below 10 requires 1 additional week of training for every 2 points below 10. Conversely, an Attribute above 10 requires less effort. Above 14, it takes only one week to gain 1 point. Characters with a score of 18 or higher gain 1–2 points per week of training.

Gaining Skills

To learn a Skill, you need a score of at least 12 in an Attribute and a mentor who has that Skill. You can then improve it on your own unless otherwise stated. The higher your Attribute score, the faster you learn. You cannot learn Skills and improve Attributes at the same time.

With an Attribute score of 12 and a mentor, it takes two weeks to learn a Skill at level 1. Subtract three days for every 2 additional Attribute points.

Improving Skills

If you have the Skill, you can train on your own or with a mentor. The higher your Attribute score, the less time you need.

With an Attribute score of 12, allow an average of three weeks. At 16 or higher, it takes only one week. If you find a mentor whose level in the Skill is at least one higher than yours, reduce the training time by one week, unless your score in the relevant Attribute is 16 or higher.

Gaining or Losing Renown

Your group can gain Renown during missions. This causes different factions to react to you according to your past actions. As a result, the same action can earn you points with one faction and cost you points with another. If your Renown with a faction falls too low, you may be attacked on sight.

Be aware that some NPCs will refuse to help you if your Renown is too low.

Your Abnormality Level

Your Abnormalities

Everyone starts with one known Abnormality trait and one unknown trait that you must keep secret, but you may gain more over time as a result of your actions. The GM will inform you, and you must record the trait on your character sheet along with the number of Abnormality points assigned by the GM. If you fail to do so, you may be penalized: you can receive the points for the same Abnormality more than once.

Hiding Your Abnormality

As explained in the introduction, you must hide your Abnormality from everyone. If you act strangely, the others may call for a vote and discuss your behavior.

If the vote concludes that you are acting strangely and the group reports you, you gain 1 to 3 Abnormality points. If your meter is full (7 Abnormality points), your fate rests in the hands of your fellow adventurers. You then face expulsion from the group or death.

If the other players decide to keep you in the group, they are risking their lives as well. If an NPC notices that your level has reached 7 and that you have not at least left the city, the entire group risks exile or death for concealing you.

Likewise, NPCs may decide to assign you points based on your actions or words. Informing on others is commonplace in this setting, so do not be surprised if you gain one or two Abnormality points after a conversation.

Fortunately, not everyone supports this policy. During your adventure, you may encounter exiles or people who lost a loved one because of a harmless Abnormality. The person you are speaking to may even be an exile. Assess each situation and act on the information you have gathered.

Beware: the SU awakens at regular intervals, and it will show you no mercy.

Lowering Your Abnormality Level

Once you reach 7 points, you are considered "Abnormal" and will be hunted and marked by SU sentinels. Trying to infiltrate the city could cost you dearly. From that point on, you will no longer be able to return to the city without consequences. It is still possible to reach the end of the adventure, but it will not be easy.

At 6 points, you become an exile; your character is no longer welcome in the city. You are no longer entitled to anything. You lose your home and personal belongings. The only things you still own are the clothes on your back and your Renown. You may enter the city at your own risk, but do not be there when the SU activates. A word of advice: leave the city before the SU activates.

Before reaching that point, however, you can lower your Abnormality points. As long as you have no more than 5 points, you can volunteer for an SU reintegration program.

A two-week program allows you to lose 1 Abnormality point if your level does not exceed 3. The program lasts one additional week for each point above 3. These programs take time and replace a training activity.

Another way to lose points is to conform by undergoing surgery or making a physical change, if the trait allows it. This immediately removes 1 Abnormality point and removes the trait from your character sheet. Examples include dyeing your hair, having a very visible birthmark removed, or restoring your hearing through reconstructive surgery (see Removing an Abnormality Trait).

You can also inform on someone, arrest a criminal, or even kill an Abnormal in a public square to lose points. These options are primarily available to exiles, but citizens can take part as well.

Killing an Abnormal lowers your level by 2 points if you are an exile, but it affects your Renown among exiles, Abnormals, and citizens. If you do so, you gain the Merciless Abnormality. Unlike most Abnormalities, this one cannot be removed except under exceptional circumstances, and it has irreversible consequences for the story.

Reporting an Abnormality Trait

You can easily report a citizen. Be careful, however: informing on others gives you a certain reputation. For a report to be valid:

- The trait must have been observed and supported by evidence (witnesses or a photograph).
- The trait must not have been declared (it is not recorded on the character sheet).

In other words, you noticed something in the character's behavior, but nothing about that behavior appears on their character sheet.

Example: the character is afraid of spiders and cannot control their reaction, but their character sheet does not list this phobia. You have identified the phobia, but it has not been declared, so the report is valid!

By reporting the character, you lose 1 Abnormality point, but the reported character gains points. If your report is valid, the GM will let you know. If you are wrong, however, you risk an electrifying reprimand for wasting the SU's time. If you make too many mistakes, the GM may bar you from using the reporting system.

Self-Reporting

When you are at risk of losing everything, you can report yourself! In that case, you gain only 1 Abnormality point, regardless of the severity of the Abnormality (except for cannibalism).

Removing an Abnormality Trait

You can also lose Abnormality traits. For example, a character with an addiction can decide to enter rehabilitation. Removing an Abnormality trait requires either time or money.

The amount of time or money required depends on the trait's severity. Some treatments, such as rehabilitation or therapy, cost nothing. If you do

not have enough time, you will need to divide the treatment into multiple periods.

Allow one full month to remove a mental trait. Rehabilitation or therapy costs nothing, but it can fail. To determine whether the treatment fails, make one roll for each week of treatment, against an increasing difficulty set by the GM. You need 2 successes out of 4 attempts to succeed.

Surgery costs money, but the result is immediate. A simple procedure costs 400 SUM, while a more complex procedure can cost up to 1,200 SUM.

Completing any attempt to remove a trait lowers your Abnormality level by 1 point, even if you failed to remove the trait itself.

Gaining an Abnormality Trait

Your actions can give you new Abnormalities. For example, if you celebrate a victory and overindulge in the available alcohol, you may develop an addiction or dependency.

Alternatively, the GM may, at their discretion, give you a new trait that you must hide and roleplay. They may do so through a note handed to you at the beginning of the session or at any other time they choose.

Abnormality and Citizenship

Every citizen worthy of the name must denounce, report, and catalog any differences observed in an individual. At the beginning of the scenario, every citizen has access to the reporting network found on every street corner. With a single photograph, any citizen can access your character sheet and your known Abnormalities. If they discover an unknown or undeclared Abnormality, it is their duty to report you. They can also see your Abnormality level and may report you if you act like a good citizen even though you are an exile—or they may not.

Of course, you can do the same—if you have the heart for it.

The Passage of Time

Time and Characters

In *Ab/NORMAL*, time is an important part of the narrative, so do not waste it! Each year that passes in the game adds one year to your character's age. Yes, your character can grow old and die!

A complete scenario generally represents about 3 or 4 weeks of in-game time, or longer for more substantial scenarios.

When the game reaches your character's birth month, they age one year and may advance from adult to senior or from junior to adult. **Don't forget to celebrate their birthday!** Reallocate points as needed if they change categories (from youth to adult, for example), while remaining consistent with their abilities.

If your character is a senior aged 85 or older, cross your fingers: they may not make it. To determine whether your character is still alive, roll a d20 using any Attribute, with a difficulty of 12 up to age 90, 14 between ages 90 and 95, and 17 above age 95.

If you reach the age of 110, you die with no roll allowed!

When your character dies of old age, transfer **5 bonus Attribute points to the character who takes up the mantle.** This character receives the base points for their age plus the bonus points from your deceased character.

Passive Healing

As in real life, time can heal anything—or almost anything. If one of your limbs is torn off, it will not grow back unless you are a Reptilian.

A broken bone heals in 3 weeks for an adult, 5 weeks for a senior, and 2 weeks for a young character.

You recover 1 to 3 HP per day depending on your age. An adult recovers 2 HP, a senior 1 HP, and a young character 3 HP.

If you are a citizen, your smartwatch injects you with an RU in the event of a serious injury once the situation has been resolved or the combat has ended, **unless you are fighting the SU.** In that case, you will have to purchase your remedy.

If you fight the SU, your smartwatch will not restore any HP lost during that combat, even if you are not yet an exile. The same applies to **self-inflicted injuries** intended to trigger the healing mechanism.

Purchasing System Reference

Item	Description	Citizen Price	Exile Price
Cybernetic Smoke Bomb	**Prohibited item! Cannot be purchased.** Briefly scrambles nearby sentinel and camera sensors.	N/A	N/A
Surgery	A surgical procedure to correct a trait or restore an impairment. The price depends on the procedure's complexity. To purchase this service, **you must travel to the employment zone** for the procedure.	400–1200	800–4000
USB Drive	A small device used to store and transfer information via NFC from one machine to another.	20	200
Swiss Army Knife	A handy multitool used to tighten or loosen screws, cut with a small laser, and scan devices. It **does not count as a weapon** because it is too small and weak to inflict significant damage on a human or sentinel.	100	500
Makeup	Temporarily conceals your Abnormalities. One supply lasts for one month, provided you remember to apply it every day.	5	50
Biomechanical Limb	A procedure to replace a lost limb. The price depends on the limb being replaced.	1200–2000	12 000-20 000
Animal Food Ration	A ration suited to the animal's size and diet. The price varies by size. Exiles usually prepare their animals' food themselves.	1 - 20	5 - 100
RU	A syringe containing a blue serum that triggers instantaneous regeneration. Heals injuries and instantly restores 20 HP. Does not regrow limbs.	10	100
Hair Dye	Dyes your hair in system-approved colors: brown, black, blond, and gray/white.	10	50

Weapons in Ab/NORMAL

The table below summarizes the different weapons you may encounter in the setting.

Weapon	Description	Effects	Damage*
Cybernetic Smoke Bomb	**Prohibited item! Cannot be purchased.** Briefly scrambles nearby sentinel and camera sensors.	Creates a dense smoke screen that disrupts cameras in the area and nearby SU sentinels.	0 to living beings / 2d4 to SU sentinels
Machete	Sharp 45 cm blade.	The target must close the wound to stop the bleeding. It loses 1d4 HP at the start of its turn until treated.	2d6 + 1d6 per Strength bonus
Baton	SU law-enforcement baton, **authorized for sentinels only**.	Used to stun or strike an attacker. The weapon is nonlethal as long as the wielder does not keep attacking an already unconscious target. It can break bones.	2d6 damage + 1d6 per Strength bonus. 1 HP if the target has fewer than 10 HP.
Tools of the Trade	Pitchfork, sickle, trowel, or any other tool used for manual labor.	Adapt the effect to the object.	1d6 to 3d6 + 1d6 per Dexterity bonus or per 2 bonus points
Laser Pistol	Requires no ammunition, but is effective only at short or medium range (0–15 meters). It must recharge for one full day after every 50 shots.	Burns a hole at the point of impact and scorches everything in the laser's path.	3d6 + 1d6 per Perception or Dexterity bonus

Weapon	Description	Effects	Damage*
Antique Pistol	A collector's weapon that must be reloaded but is effective up to 50 meters. Capacity: six bullets. Ammunition not included.	Punches a hole and leaves evidence. The target must stop the bleeding, which may be impossible depending on the location of the wound. It loses 1d6 HP at the start of its turn until treated.	2d6 + 1d6 per Perception bonus
Sniper Rifle	A scoped long-range rifle effective up to 500 meters. Reloading takes one turn, and only one shot can be fired before reloading. It is one of the deadliest weapons in the game, but also one of the rarest.	Can easily tear off limbs at close range. It is generally used to kill a dangerous target. If a limb is torn off, the target loses 1d10 HP per turn until treated.	6d6 + 1d6 per Perception bonus
Taser	Standard **nonlethal** Taser approved by the SU. It immobilizes humans without killing them. The weapon can never kill its target.	Immobilizes a human or animal and damages robots. Stuns a human or animal for one turn. Always leaves an Earth-native target with at least 1 HP. Deals double damage to machines.	1d6 damage unless the target has only 1 HP remaining.

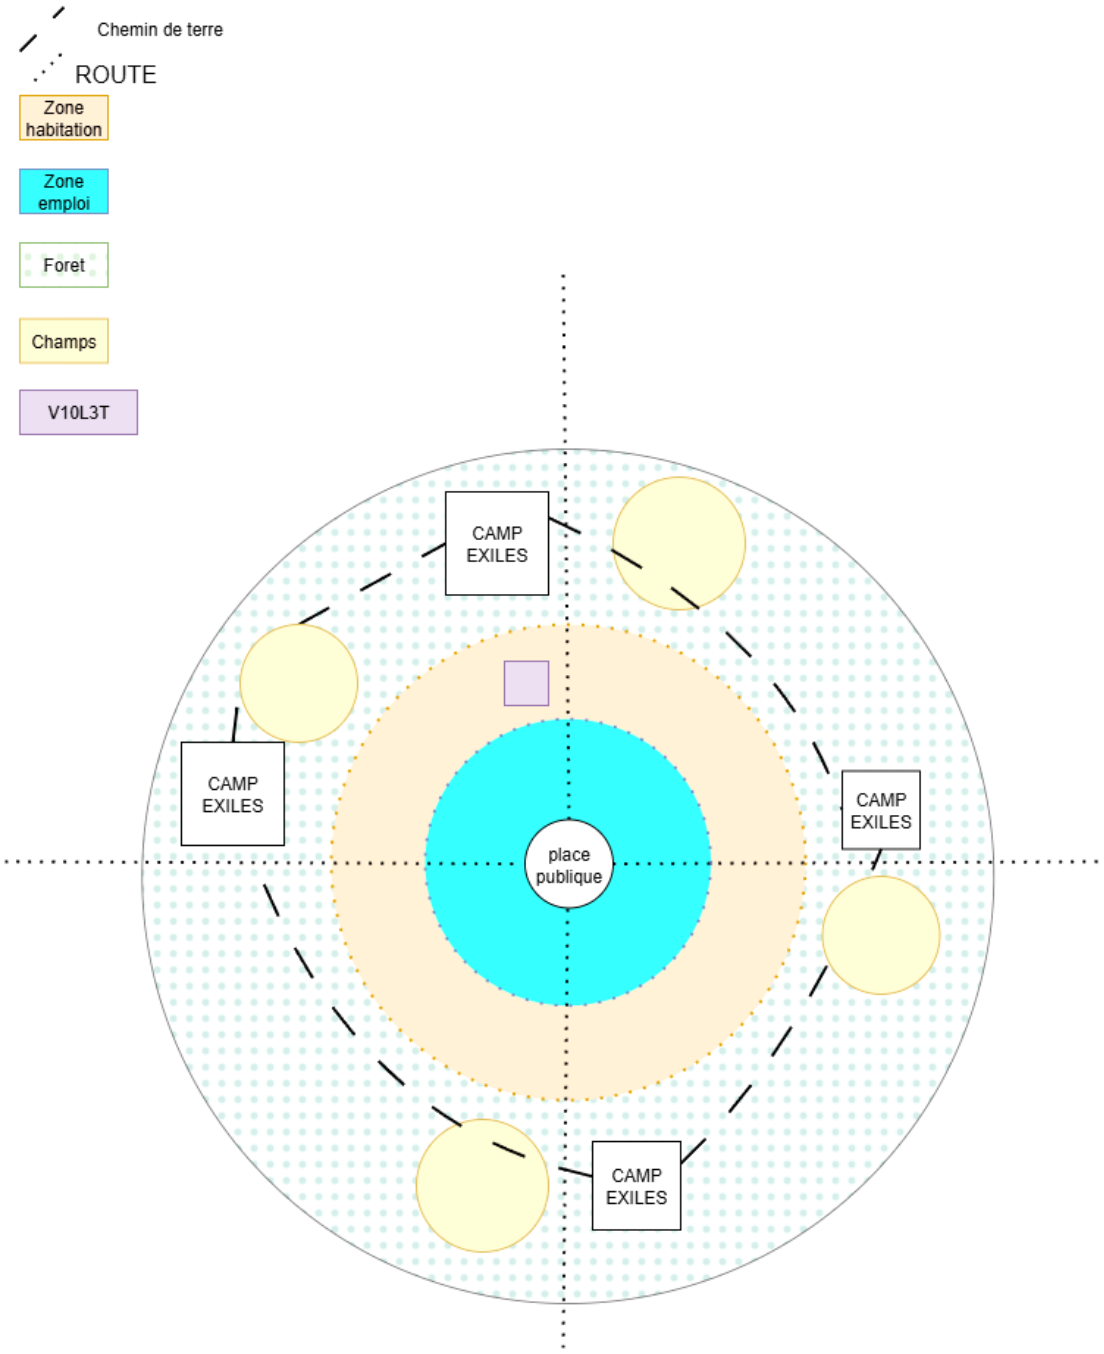

*Weapon damage can be adjusted to the players' abilities.

For example, a player with 18 Strength who is equipped with a machete deals 2d6 damage plus one additional die per Strength bonus—in this case, four additional dice. This gives the machete a total of 6d6 damage. A player with a Strength penalty, however, deals only 2d6 damage with the same weapon.

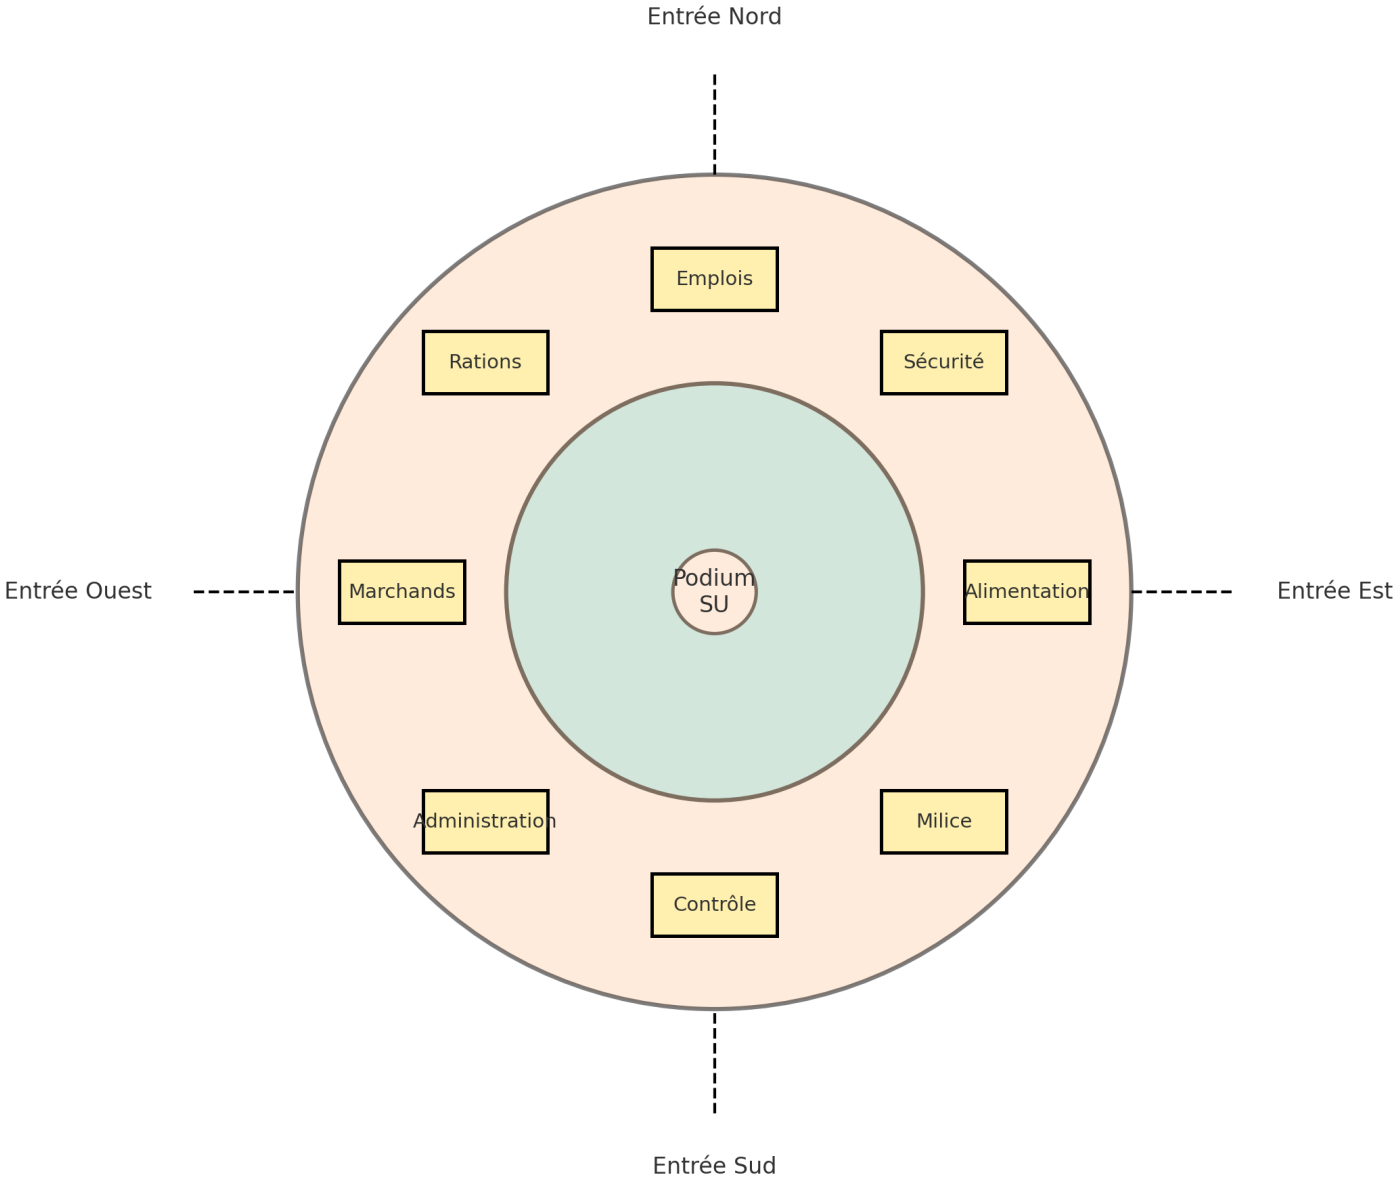

Bleeding damage can stack with the number of wounds, but it cannot exceed 1d20. When a target has two bleeding wounds, it loses 1d12 HP per turn. Adding another wound increases this to 1d20 HP per turn, and it cannot rise any further.
